PROFESSIONAL SUMMARY

Senior AI Solutions Engineer with 8+ years building production AI and enterprise automation systems inside Fortune-class organizations. I design and ship Agentic AI architectures (RAG, multi-agent orchestration, A2A protocols, voice-enabled agents, human-in-the-loop systems) on LangChain, LangGraph, Azure AI Foundry, and Google ADK, embedded directly within customer environments rather than from the outside. At Indosat Ooredoo Hutchison (3,000+ employees), I have delivered 9+ production systems recognized at organizational scale: ranked 23rd out of 3,000 employees in AI Adoption Challenge (Ace Champions), and named Top 10 High-Impact Architect in internal innovation competition for ASTRID-AI enterprise platform. Key deliverables include ASTRID-AI (agentic enterprise assistant reducing helpdesk volume by 60%, SLA from 30 to 3 minutes, and CICO-validated 54% overtime cost reduction in one quarter), voice-enabled expansion on Azure, and active extension into Legal, Regulatory & Data Privacy function. My moat is the rare combination of deep AI engineering, Microsoft Power Platform mastery, SAP SuccessFactors integration depth, and CHRP®-certified understanding of HR systems, enabling AI solutions that survive enterprise complexity, compliance, and stakeholder management.

CORE COMPETENCIES

AI & Agentic Systems: LangChain · LangGraph · RAG · Agent-to-Agent (A2A) Protocols · Google ADK · Azure AI Foundry · Azure Speech Services · OpenAI GPT-4/o · Vertex AI · Voice Agents · Prompt Engineering · Evaluation Frameworks

Low-Code & Automation: Microsoft Power Platform (Power Apps, Power Automate, Copilot Studio) · SharePoint Online · SAP SuccessFactors (6 modules) · SAP Workzone · Robotic Process Automation (RPA) via UiPath

Engineering: Python · Node.js · PHP (Laravel, CodeIgniter, Phalcon) · JavaScript · REST / SOAP APIs · SQL & NoSQL · Git, CI/CD

Cloud & Architecture: Azure · AWS · Google Cloud Platform · Microservices · System Integration · Solution Design · Cross-Platform Development

Domain & Leadership: HR-Tech & HRIS Architecture · Enterprise Stakeholder Management · Forward-Deployed Delivery · Technical Leadership · CHRP® Certified

PROFESSIONAL EXPERIENCE

Senior Officer — Application Management · PT Indosat Ooredoo Hutchison (Indosat Tbk.)

September 2021 — Present · Jakarta, Indonesia · Sr. AI / Solutions Engineer track

Architect and lead delivery of enterprise AI, agentic systems, and automation across HR, Talent, and most recently Legal, Regulatory & Data Privacy (LRO) functions, supporting 3,000+ employees. Operate as an internal Forward-Deployed Engineer: embedded directly with business stakeholders to ship production-grade AI that solves real organizational problems end-to-end.

- **Organizational Recognition & Awards** — Ranked 23rd out of 3,000 employees in Indosat's 2025 AI Adoption Challenge (Ace Champions program), validating impact and visibility at enterprise scale. Named Top 10 High-Impact Architect in internal innovation competition for ASTRID-AI enterprise platform initiative, demonstrating recognized leadership in AI strategy beyond individual technical delivery.
- **ASTRID-AI (Agentic Enterprise AI Assistant)** — Architected and shipped a custom Teams-integrated agentic AI system on LangChain and LangGraph, with Retrieval-Augmented Generation (RAG) over internal HR policy documents and SAP SuccessFactors transactional data. Implemented Agent-to-Agent (A2A) orchestration patterns for complex policy reasoning, clock-in/clock-out (CICO) validation, and time-attendance workflows. Currently extending the architecture with Google's Agent Development Kit (ADK) to evaluate multi-framework agent interoperability.

- **ASTRID-AI Voice (in active scale-up)** — Finalized and now scaling a voice-enabled extension of ASTRID-AI on the Azure ecosystem (Azure AI Foundry, Speech Services, and OpenAI), enabling hands-free HR self-service for field and operational employees. Designed for enterprise-grade observability, latency targets, and integration with the existing agentic pipeline.
- **LRO digital transformation (in active delivery)** — Leading the digital transformation of the Legal, Regulatory & Data Privacy (LRO) function extending the agentic AI playbook beyond HR into a regulated, compliance-sensitive domain. Architecting a SharePoint-based all-in-one portal with AI-powered intake review (first-pass triage and validation of service requests) while preserving human consultation for high-judgment legal advisory. Demonstrates a human-in-the-loop AI design pattern tailored for regulated enterprise functions.
- **Overtime cost reduction (CICO validation)** — Drove a 54% reduction in overtime cost within a single quarter by automating clock-in/clock-out validation through ASTRID-AI's agentic time-attendance workflow integrated with SAP SuccessFactors. Outcome was independently validated through the CICO system, providing auditable evidence of savings.
- **Helpdesk transformation** — Drove a 60% reduction in HR helpdesk ticket volume by implementing a Tier-0 AI deflection strategy through ASTRID-AI. Re-architected the underlying ticketing pipeline on Microsoft Power Platform and SAP Cloud for Customer (C4C), reducing SLA from 30 minutes to under 3 minutes (90% reduction).
- **Medical Check-Up (MCU) automation** — Led full re-engineering of the MCU administrative workflow for 3,000+ employees, integrating hospital partner APIs with SuccessFactors and Power Automate. Reduced turnaround from 3 working days to under 5 minutes, a 99% improvement.
- **SAP SuccessFactors enterprise rollout** — Delivered implementation of 6 SuccessFactors modules (Onboarding, Offboarding, Recruitment Management, Recruiting & Marketing, Learning Management, Succession & Development) through a hybrid of native configuration and custom-integrated extensions, serving 3,000+ employees.
- **Verified WhatsApp Business integration** — Established and integrated a verified WhatsApp Business channel for HR communications, including standardized message templates for new-joiner journeys; achieved 80%+ utilization in the first rollout cycle.

Officer — HRIS Solution & Full-Stack Developer · [PT Indosat Ooredoo Hutchison](#)

October 2019 — September 2021 · Jakarta, Indonesia · Solutions Engineer track

Designed, built, and integrated 9+ custom HR applications from scratch into a unified digital ecosystem. Owned end-to-end delivery from architecture to deployment, working directly alongside HR business stakeholders to translate ambiguous organizational needs into shipped software.

- **Custom application portfolio** — Built MyTalent (Performance Management), HROne (All-in-One HR Hub), NEO (New Employee Onboarding), TalentReview, MyLearningSNA (ML-powered learning recommendations using Social Network Analysis), the Indosat Career Portal (careers.ioh.co.id), and MyHiring (Applicant Tracking System).
- **LinkedIn Learning integration** — Architected the integration between LinkedIn Learning and the internal MyLearning / MyDev platforms, enabling unified content access and automated learning tracking. Result: 30% increase in self-initiated learning activity.
- **Pandemic response automation** — During COVID-19, automated HR letter generation to support distributed teams, reducing processing time from 1 business day to under 10 minutes.
- **Document integrity system** — Designed and shipped a secure QR-code verification system for annual statements and project-based HR documents, ensuring compliance and authenticity at scale.
- **ASTRID v1 (chatbot + ticketing)** — Provided technical leadership for the original ASTRID HR helpdesk chatbot and ticketing system, achieving high enthusiasm in the first rollout until now because of the simplicity.

Full-Stack Developer · [PT Lintas Media Danawa \(eBesha\)](#)

January 2019 — October 2019 · West Java, Indonesia

Delivered production-grade APIs, dashboards, and full-stack systems with 99.9% uptime targets. Provided technical leadership across both backend and frontend teams for the eBesha CRM product line.

- **Bank BPD Riau Contact Center** — Led end-to-end delivery of a full-stack Contact Center solution, integrating network trunking with the existing telecom provider, CRM modules, SMTP infrastructure, and backend servers. Enabled centralized multi-channel customer service and reduced response latency.
- **eBesha CRM technical leadership** — Provided architectural guidance and hands-on support to backend and frontend teams delivering the custom CRM product.
- **Performance impact** — Reduced manual reporting effort by 60% and accelerated feature delivery by 30% through architectural and tooling improvements.

Enterprise System Developer · PT Internux (BOLT!)

August 2018 — January 2019 · Jakarta, Indonesia

Built and operated web-based financial and customer-facing systems on Laravel, with strong emphasis on data integrity and API-driven design.

- **BOLT! Online Refund System** — Built a customer-facing platform enabling real-time credit refunds via payment gateway API integration, eliminating the need for in-store visits and reducing refund processing from days to minutes.
- **Finance Refund System** — Delivered internal refund-processing system that streamlined operations across finance teams and removed manual workload bottlenecks.

Oracle Database Support · PT Indosat Tbk. (Indosat Ooredoo)

October 2017 — May 2018 · Jakarta, Indonesia

- Built optimized SQL pipelines and automated reporting across datasets of 1–4 million rows; cut manual analysis time by up to 50%. Delivered a real-time executive dashboard for Group Head consumption, eliminating reporting delays for 1–2 million-row daily aggregates.

System Administrator (Internship) · PT Mitra Akses Globalindo (MAGnet)

August 2017 — October 2017 · Jakarta, Indonesia

- Pioneered a social-login hotspot system using OAuth SSO with Facebook and Twitter — an uncommon approach at the time — improving onboarding speed and brand traceability. Implemented Zoho MDM for centralized device management across multiple client environments. Built the MyBatiCloud company profile and a PHP/Bootstrap ticketing system.

EDUCATION

Bachelor of Applied Science, Informatics Engineering

2014 — 2018 · State Polytechnic of Jakarta (PNJ) · GPA 3.53 · S.Tr.Kom

CERTIFICATIONS

- **Microsoft & Digital Talent Academy (2026)** — Artificial Intelligence with Azure and Microsoft Fabric
- **Digital Talent Academy (May 2026)** — Data Scientist Supervisor
- **ServiceNow (June 2025)** — IT Leadership Professional Certificate
- **Microsoft & LinkedIn (2025)** — Microsoft Security Essentials Professional Certificate
- **CIPD & LinkedIn (2025)** — Human Resources Foundations
- **Dicoding (2024)** — Google Cloud Foundations; Cloud Foundations
- **AWS Academy (2023)** — AWS Academy Graduate — Cloud Foundations
- **Dicoding (2023)** — SOLID Principles in Programming
- **UNIKA Atma Jaya (2022)** — Certified Human Resource Professional (CHRP®)
- **CISCO (2022)** — DevNet Associate; Introduction to IoT
